

Flexible by design. Focused on results.

Diagnostic testing has experienced a rapid transformation in the post-pandemic era. There has been an increased focus on patient-centric testing, greater demand to reach more diverse and targeted subject populations, and an emergence of new technologies. Beaufort has been at the forefront of supporting sponsors during this evolution. Our team understands the unique complexities, risks, and requirements of IVD clinical studies across all testing environments and specializes in delivering comprehensive solutions to help sponsors speed their path to market.

EXPERTISE ACROSS EVERY SETTING TO MEET YOUR UNIQUE TRIAL NEEDS

IVD clinical studies are inherently unique and impact all aspects of your project. We understand these distinctions and our comprehensive services support total product lifecycle development across all intended use settings, IVD technologies, and therapeutic areas.

Beaufort has been an excellent partner in driving a trial with considerable complexity. We have been impressed with the passion/adaptability of the team and the spirit of continuous learning they bring to the table to drive excellence.

Radha Duttagupta, Vice President, Clinical Affairs, Nucleix

DCTS & HYBRID MODELS

Beaufort's team of experts design, plan, and execute decentralized and hybrid clinical trials with customized solutions that deliver greater flexibility and support for sponsors, sites, and patients. Our combination of technology-enabled services, operational expertise, and strategic partnerships help to:

- ✓ **Improve** subject recruitment and enrollment with data-driven targeting based on disease prevalence, population density, and other key indicators
- ✓ **Simplify** and optimize processes through integration of best-of-breed technology platforms
- ✓ **Strengthen** data integrity, quality and security with eConsent, eSource, and Direct Data Capture integration
- ✓ **Reduce** study timelines through remote monitoring, virtual visits, and patient-friendly tools

POC & AT-HOME DIAGNOSTIC TESTING

Point of care and at-home diagnostic testing present distinct considerations compared to traditional laboratory-based tests. Advances in new technologies including devices for self-testing further highlight the need for an experienced CRO partner. Our full service solutions include:

- ✓ Comprehensive clinical planning
- ✓ Study design & protocol development
- ✓ Usability testing & evaluation
- ✓ Subject recruitment
- ✓ Clinical trial monitoring
- ✓ Regulatory strategy
- ✓ Regulatory submissions
- ✓ Data analytics
- ✓ Biostatistics planning and analyses
- ✓ Data management & operations
- ✓ Cybersecurity
